Prehistory

Sol system 2521 AD

The planetary system of our sun is new, fast and explored manned spaceships. Many people leave the earth captured by the longing to discover new worlds. Colonies and Bases are also established in the most remote locations of the Sol system.

Some brave people set out into interstellar space to travel to distant planets in our galaxy.

The "Cybernetic War", which begins in 2995 AD, stops this development.

At the end of the war in 3000 AD it will the Solar Parliament formed. Biological and biogenic humanity will form from now on together the new humanity of the Sol system.

A new era is introduced in the Sol system.

The year 1 ST (solar time) begins.

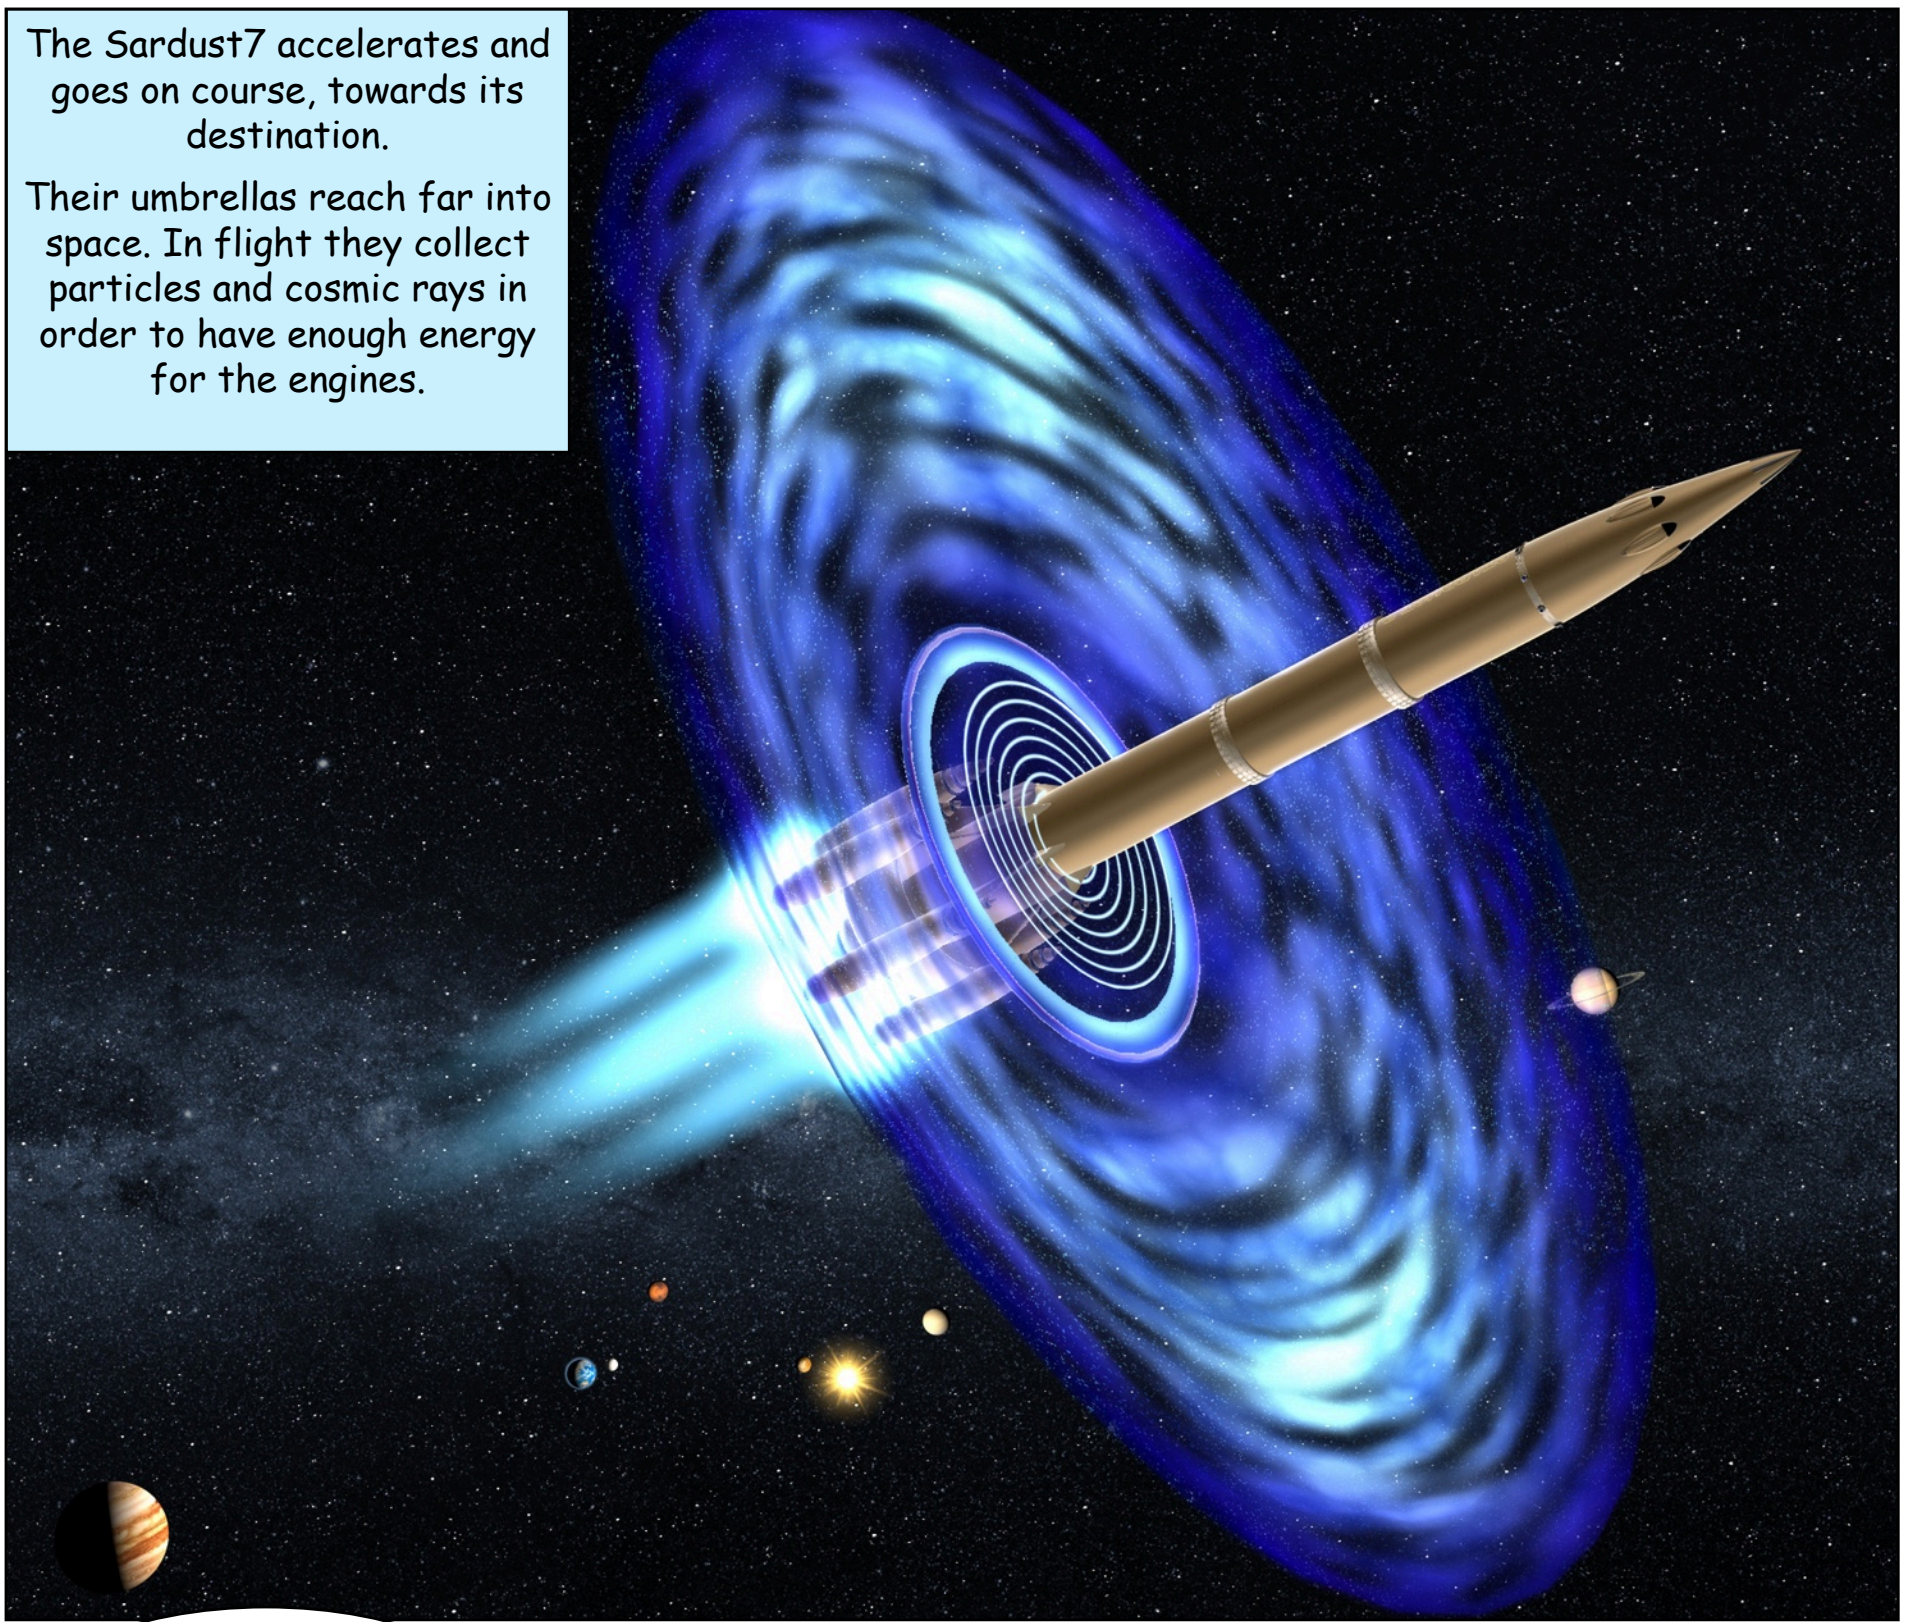

In 196 ST a small special unit is formed, which is able to research strange processes in space.

The EVEN·X

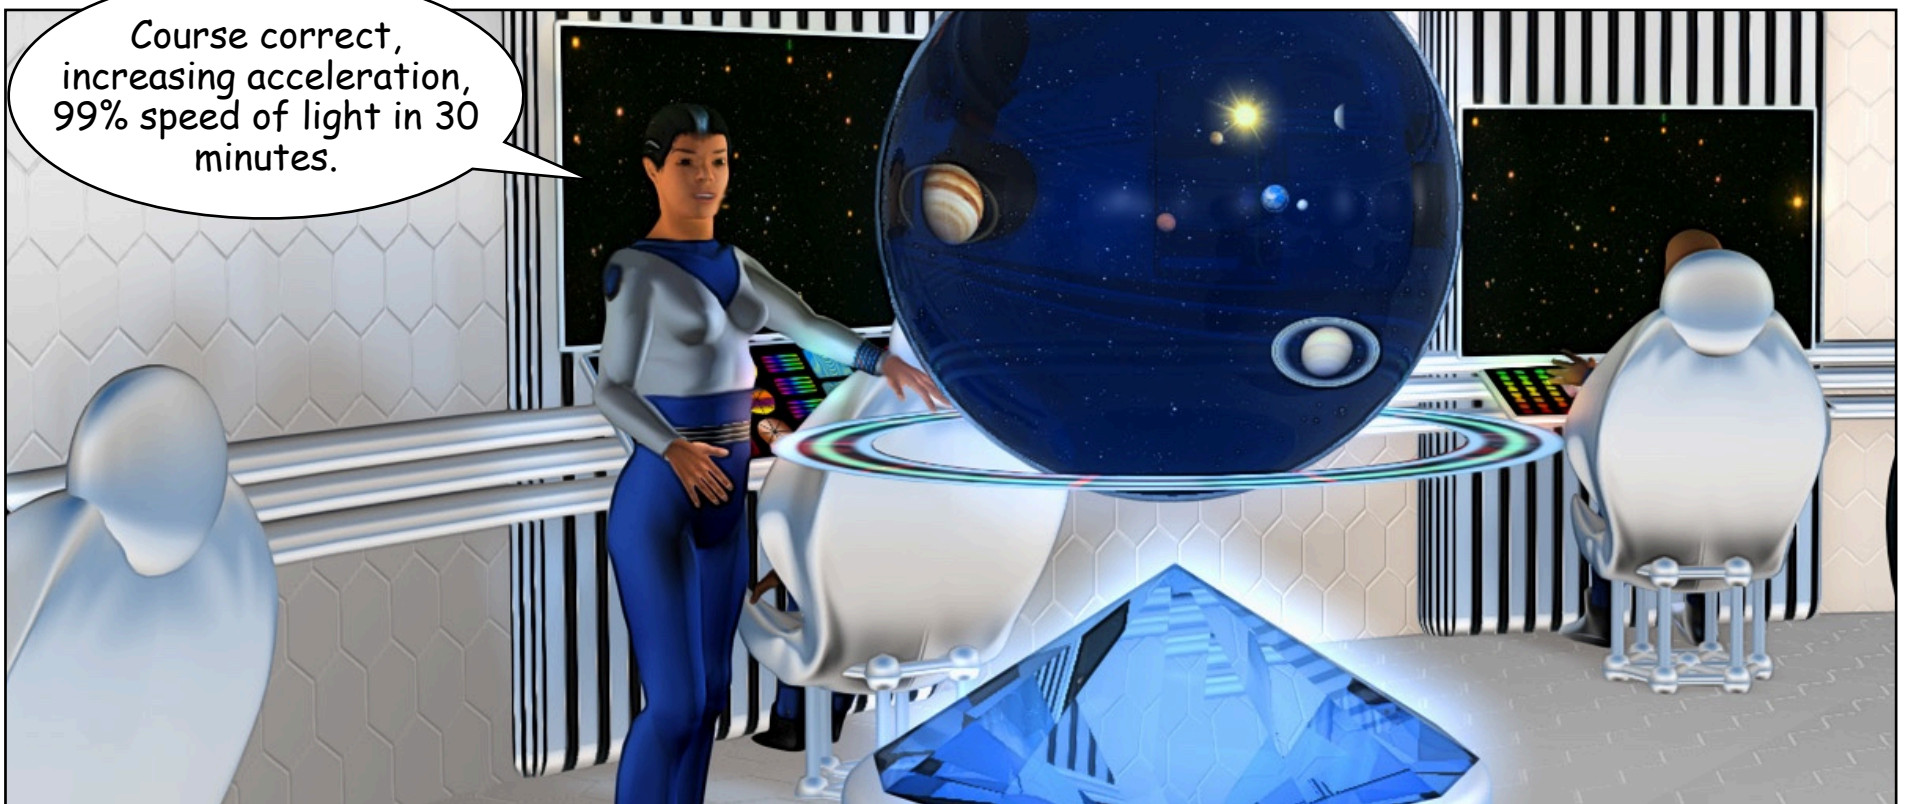

Well in the past, the STARDUST 7 starts and hears it
CALL OF POSEIDON

The Sardust7 accelerates and goes on course, towards its destination.

Their umbrellas reach far into space. In flight they collect particles and cosmic rays in order to have enough energy for the engines.

Course correct, increasing acceleration, 99% speed of light in 30 minutes.

Suddenly a bright laugh penetrates the control center.

I almost forgot the two of them.

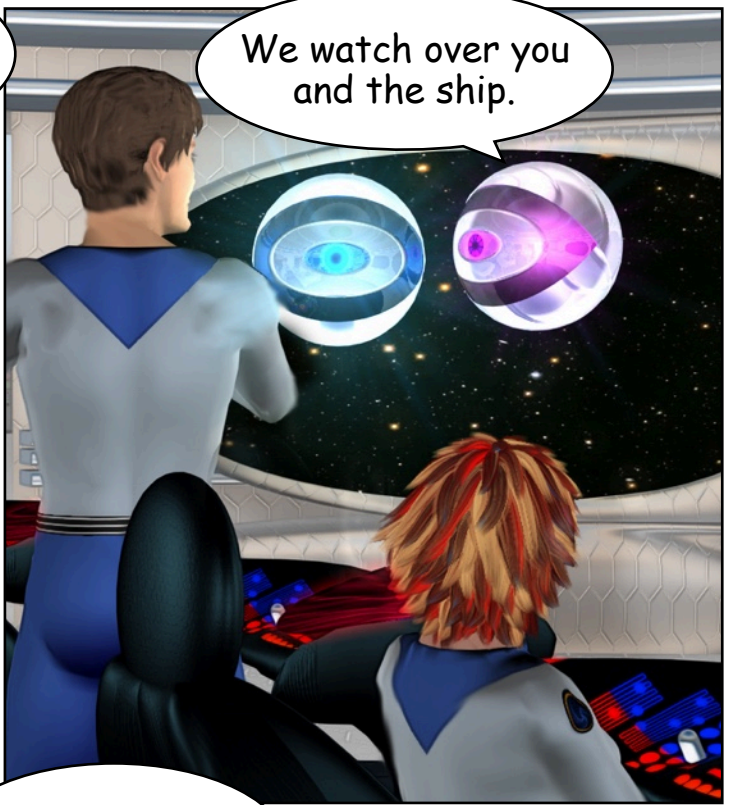

Hello Starboy, Stargirl!

Hello friends!

You can go to sleep now.

Holographic Guardians! I would not have expected that here.

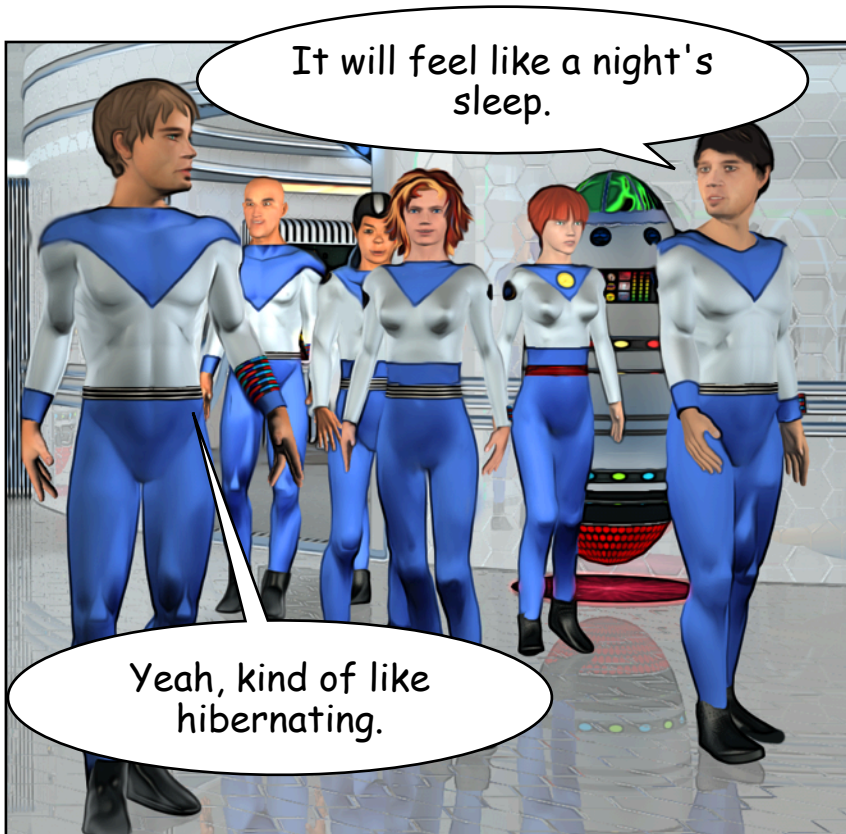

We watch over you and the ship.

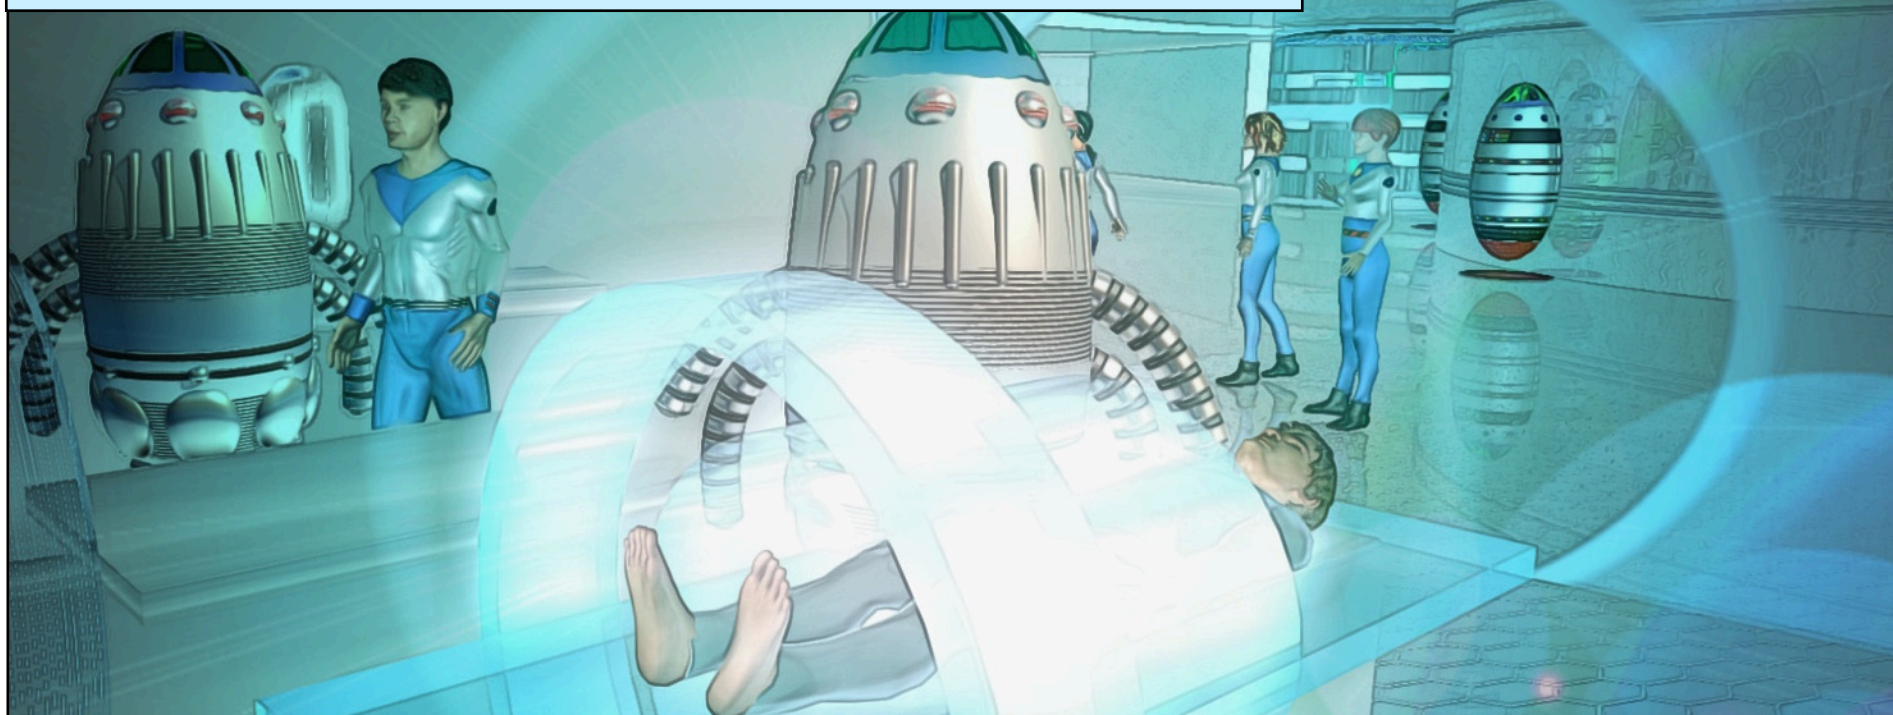

I never get used to this laugh.

Come on, we have to go to the MediCabs.

Nice dreams!

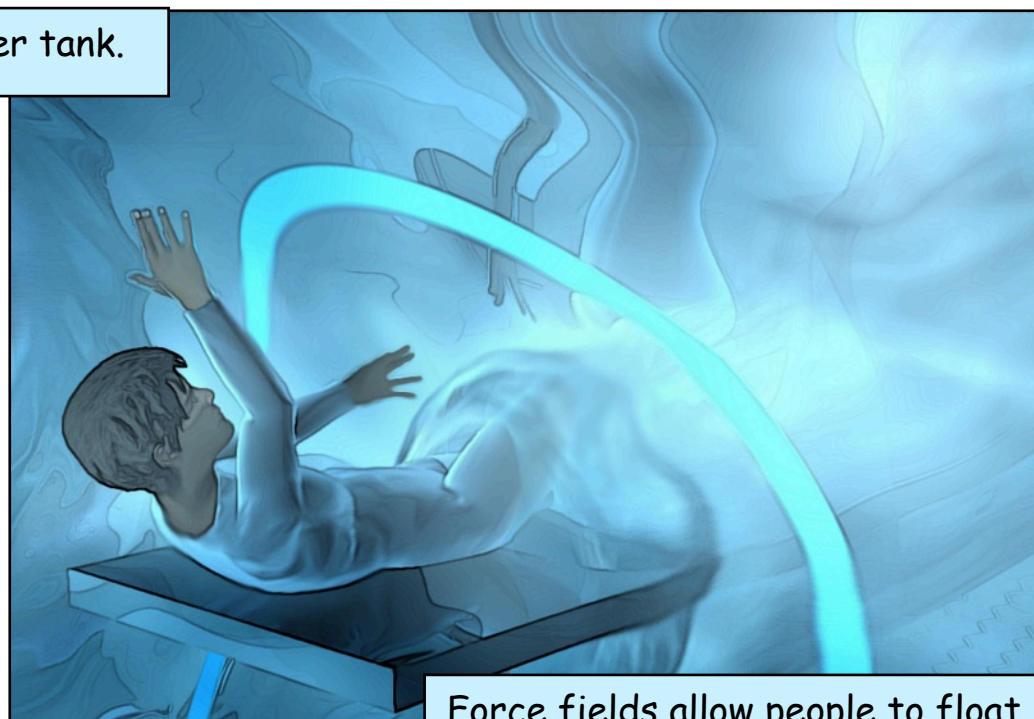

The MediCabs convert the crew from breathing air to bioplasma.

The last part of the crew is sleeping ...

... and floats in transport capsules to the larger tank.

Force fields allow people to float gently into the tank.

Get it on
